Professional Summary

Data Analyst with hands-on project experience in data cleaning, exploratory data analysis (EDA), and dashboard development, having processed 150,000+ records to surface adoption trends and support data-driven decision-making. Proficient in SQL, Python (Pandas, NumPy), Power BI, and Advanced Excel, with a track record of building interactive dashboards, automating data preparation workflows, and translating raw data into clear, actionable business insights for non-technical stakeholders. Strong foundation in statistical analysis, data storytelling, and query optimization, with an eye for data accuracy, confidentiality, and continuous learning in analytics tools and techniques.

Skills

- **Data Analysis & Statistics:** Exploratory Data Analysis (EDA), Statistical Analysis, Data Interpretation, Trend & Pattern Identification, Root Cause Analysis, Ad-hoc Reporting
- **Programming & Querying:** Python (Pandas, NumPy, Matplotlib, Seaborn), SQL, MySQL, MySQL Workbench, Query Optimization
- **Business Intelligence & Visualization:** Power BI, DAX, Data Modeling, KPI Dashboards, Data Visualization, Data Storytelling
- **Data Management:** Data Cleaning, Data Wrangling, Data Integrity, ETL Fundamentals, MS Excel (Pivot Tables, Power Query, VLOOKUP, Macros & VBA)
- **Tools & Collaboration:** Git, GitHub, Jupyter Notebook, VS Code
- **Core Strengths:** Analytical & Problem-Solving Skills, Business Intelligence Reporting, Stakeholder Communication, Data-Driven Decision-Making, Attention to Detail, Cross-Functional Collaboration

Projects

Electric Vehicle Population Analysis Dashboard

Python, SQL, Power BI, Pandas

- Processed and cleaned 150,000+ EV registration records from multiple sources using Python scripts, automating data preparation to ensure accuracy and consistency for downstream analysis.
- Queried and analyzed data in MySQL Workbench, applying statistical techniques to uncover adoption trends and patterns by city, utility provider, and vehicle type to inform strategic decisions.
- Designed and built an interactive Power BI dashboard with custom DAX measures and slicers, giving stakeholders self-service access to key business metrics and trends.
- Conducted EDA in Python and delivered a structured analytical report, identifying that battery electric vehicles accounted for 78% of registrations versus 22% plug-in hybrids, with Tesla holding a 69,000+ unit market lead.
- Partnered with stakeholders to clarify business requirements and presented dashboard insights in non-technical terms to support decision-making.

National Health Care Analysis Dashboard

Power BI, DAX, Data Modeling

- Designed and developed a multi-page interactive Power BI dashboard analyzing 55,500 admitted patients across major hospitals, tracking key metrics including average length of stay (15.51 days), average billing amount (\$25,539), and average patient age (51.54).
- Built dynamic KPI cards, donut charts, and line charts to analyze patient admissions by day type (weekday vs weekend), length-of-stay buckets, admission type (Elective, Emergency, Urgent), and monthly trends.
- Created demographic and clinical views covering blood group distribution by gender, medical condition breakdowns (Arthritis, Asthma, Cancer, Diabetes, Hypertension, Obesity), and hospital-level patient volumes.
- Developed treatment & cost analysis pages showing total billing accumulated by length of stay and hospital, along with top prescribed medications (Aspirin, Ibuprofen, Lipitor, etc.) across different medical conditions.

Education

Bachelor of Science (B.Sc.) – Mathematics, Physics & Chemistry (MPC)

Jun 2021 – Aug 2025

Dr. B.R. Ambedkar University, Etcherla
CGPA: 7.11

Intermediate (MPC)

2021

SKK Junior College, Chapara

Percentage: **60%**

SSC

Zilla Parishad High School, Kosamala

CGPA: **7.7**

2019

Certifications

- Power BI for Beginners – Simplilearn (Jan 2026)
- Excel Macros and VBA for Beginners – Simplilearn (Jan 2026)
- Power BI Micro Course – Skill Course (Mar 2026)
